I. TECHNICAL DATA

TRACK SYSTEM	4 track 2 channel stereo system
TAPE	Philips type cassette
TAPE SPEED	4.76 cm/s $\pm 1.5\%$ (1-7/8 ips. $\pm 1.5\%$)
HEADS	Erase head x1 Twin field super GX recording/playback head x1
MOTORS	Electronically speed controlled DC motor for capstan drive x1 DC motor for reel drive x1
WOW & FLUTTER	Less than 0.035% WRMS, 0.10% (DIN 45500)
TAPE WINDING TIME	60 sec. using a C-60 cassette tape
FREQUENCY RESPONSE	LN: 30 to 15,000 Hz ± 3 dB (-20 VU) LH: 30 to 16,000 Hz ± 3 dB (-20 VU) CrO ₂ : 30 to 16,500 Hz ± 3 dB (-20 VU) 30 to 9,000 Hz ± 3 dB (0 VU) Metal: 30 to 19,000 Hz ± 3 dB (-20 VU) 30 to 13,000 Hz ± 3 dB (0 VU)
SIGNAL TO NOISE RATIO	LN: Better than 58 dB LH: Better than 59 dB CrO ₂ : Better than 60 dB Metal: Better than 61 dB (measured via tape with peak recording level) Dolby NR switch ON: Improves up to 10 dB above 5 kHz
HARMONIC DISTORTION	LN: Less than 0.8% LH: Less than 0.8% CrO ₂ : Less than 0.7% Metal: Less than 0.6%
INPUT	MIC 0.25 mV (input impedance 5.0 kohms) Required microphone impedance: 600 ohms LINE: 70 mV (input impedance 47 kohms)
OUTPUT	LINE: 410 mV at 0 VU Required load impedance: more than 100 kohms PHONE: 100 mV/8 ohms at 0 VU
DIMENSIONS	280 (W) x 161 (H) x 277 (D) mm (11.0 x 6.3 x 10.9")
WEIGHT	7.6 kg (16.7 lbs)
POWER REQUIREMENTS	100 V, 50/60 Hz for Japan Model 120 V, 60 Hz for U.S.A. and Canada 220/240 V, switchable 50 Hz for European countries and Australia 110/120/220/240 V, 50/60 Hz switchable for other countries
POWER CONSUMPTION	28 W for JPN Model 30 W for the other Models

IV. PRINCIPAL PARTS LOCATION

Fig. 2 Top View

V. VOLTAGE AND CYCLE CONVERSION

Fig. 3 Voltage Conversion

1. VOLTAGE CONVERSION

1-1. JPN, CSA and AAL Models

No, voltage conversion.

1-2. U/T Model (Refer to Fig. 3(a))

- 1) Disconnect power cord.
- 2) Loosen holding screws and remove upper cover.
- 3) Remove short pin plug from present holes and replace in correct holes. Follow the markings explicitly.

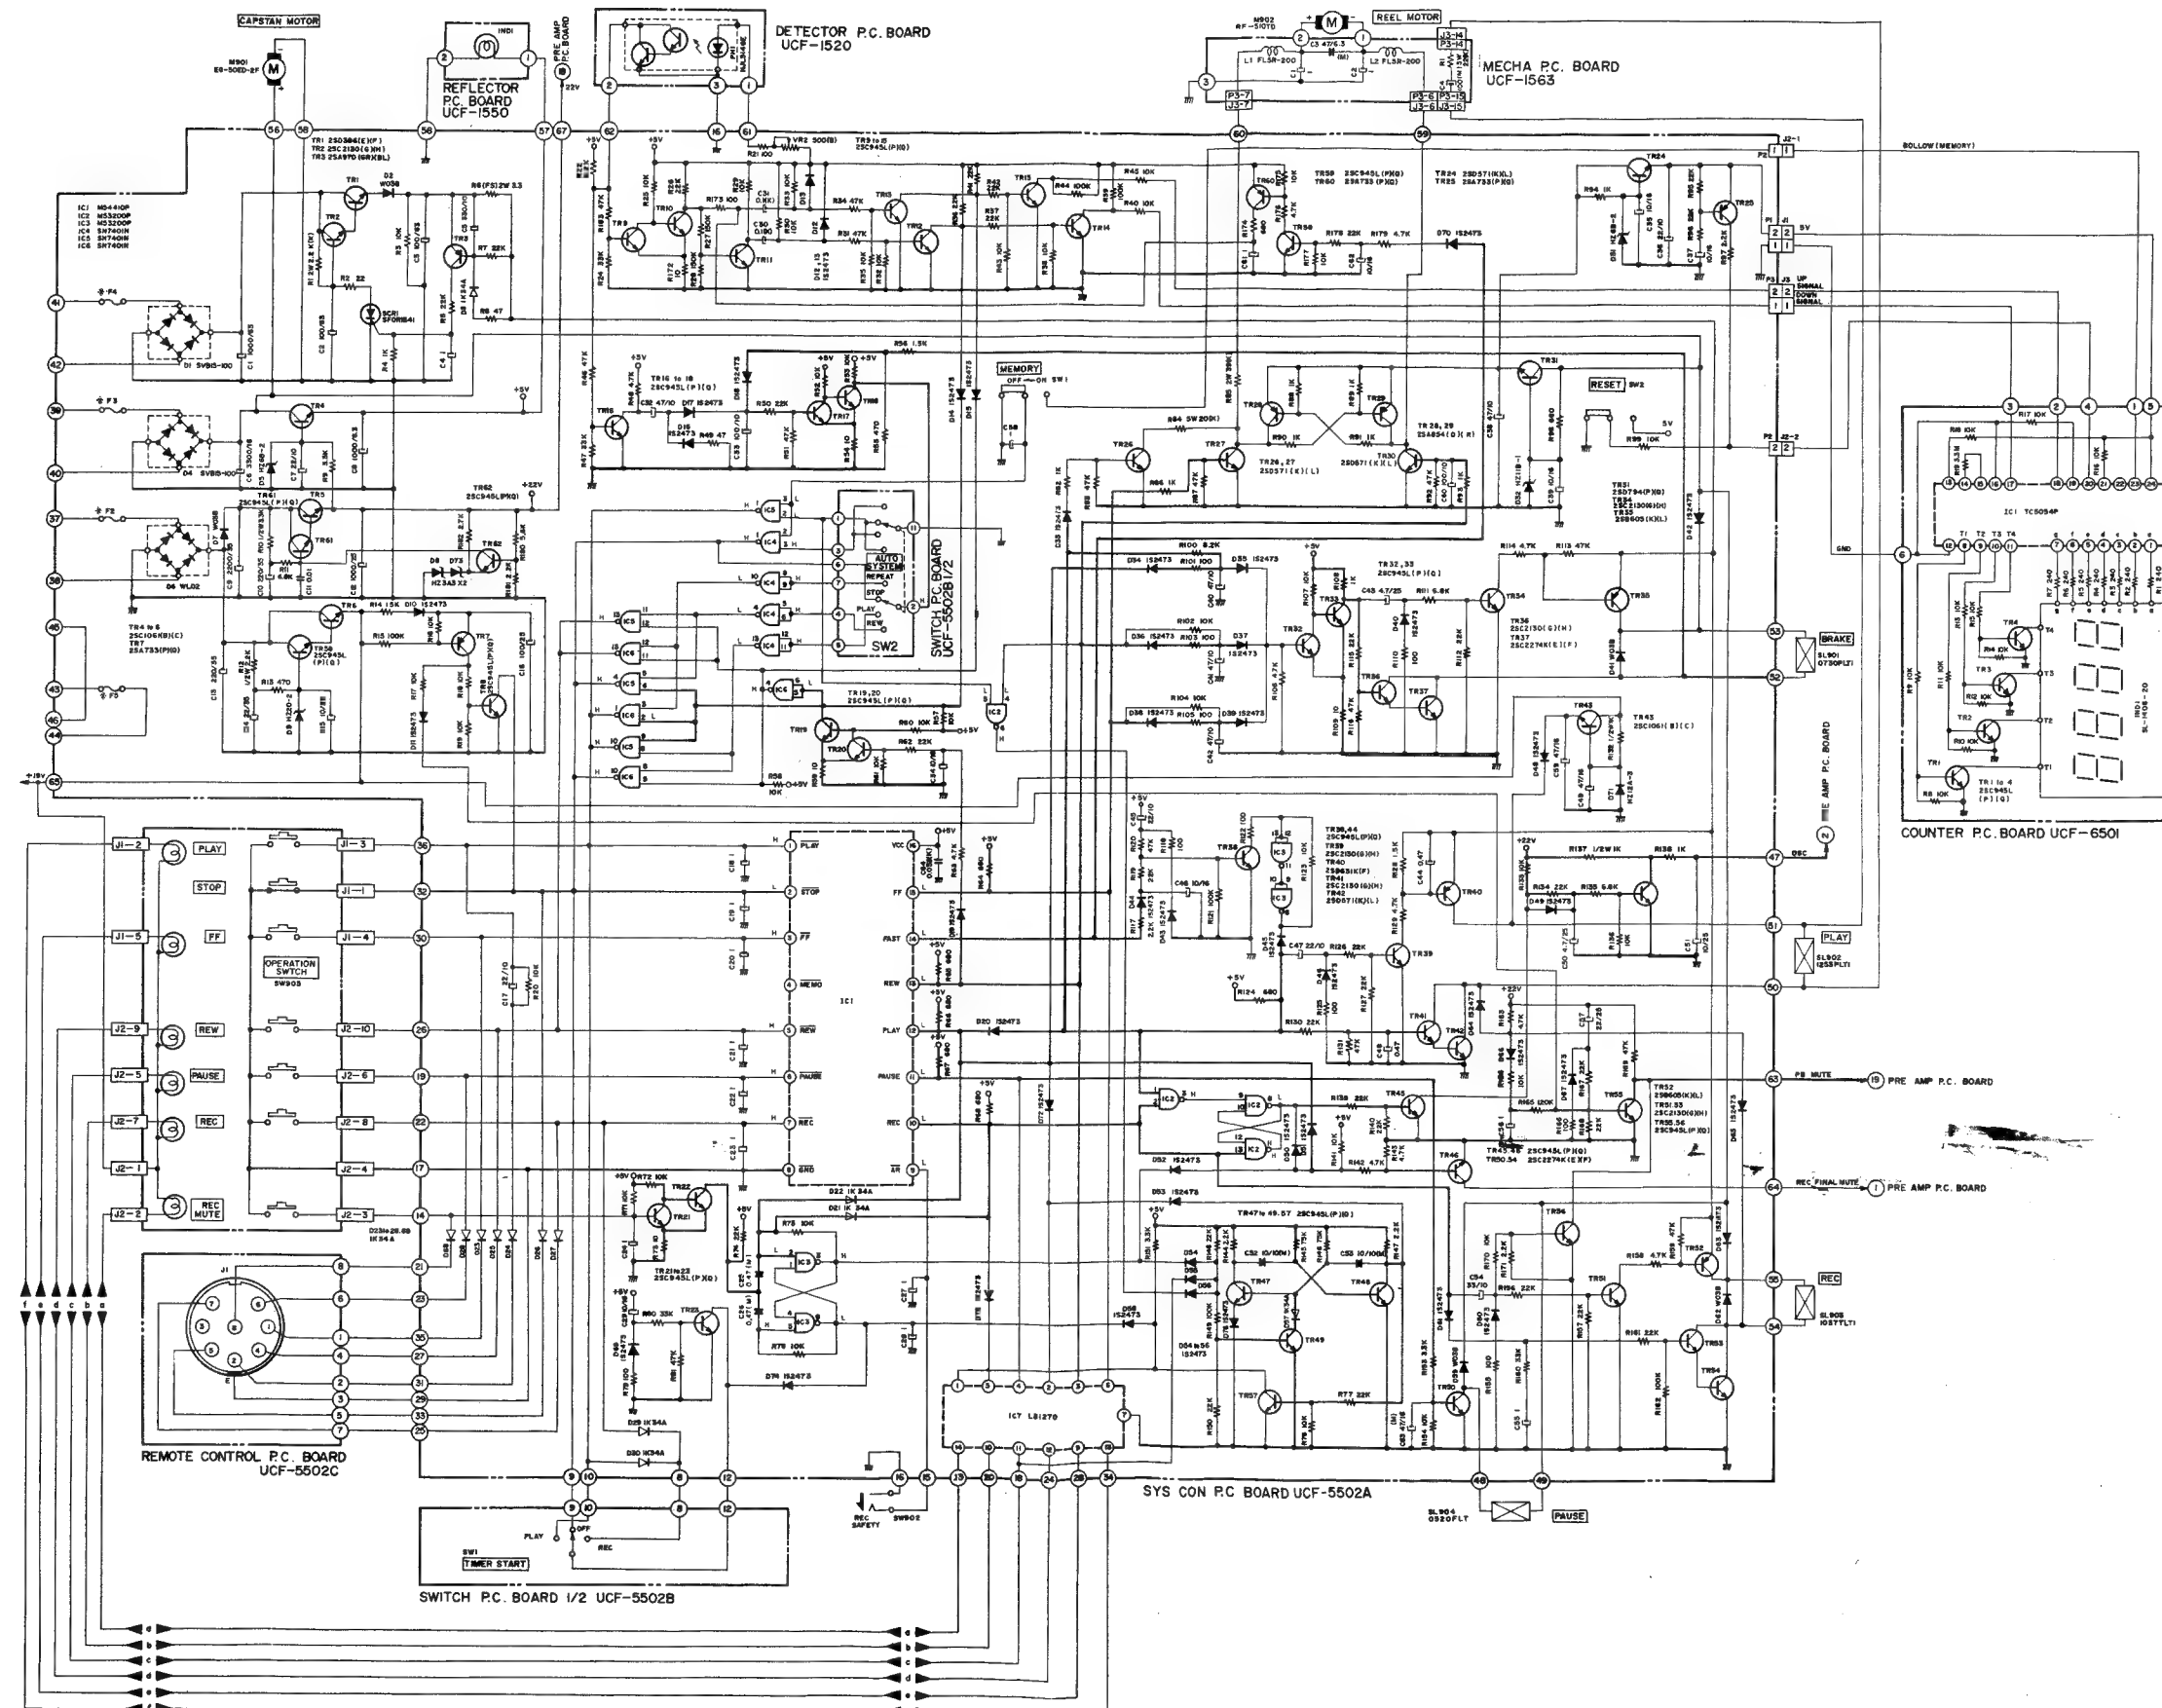

1-3. CEE, UK and SAA Models (Refer to Fig. 3(b))

A voltage selector switch is provided above the AC inlet on the back side of machine. Select the proper voltage by this switch according to the voltage to be used. Move the switch to the left side for 220V and to the right side for 240V.

2. CYCLE CONVERSION

With DC motor, cycle conversion is not necessary.

Schematic – 1 STOP MODE

Schematic - 2 PLAY MODE

[illegible]

1-1. CIRCUIT CONSTRUCTION OF IC1 M54410P

This logic IC has been developed for an operation key that will maintain a HIGH output level by even a momentary low level in the desired input terminal.

1) Block Diagram

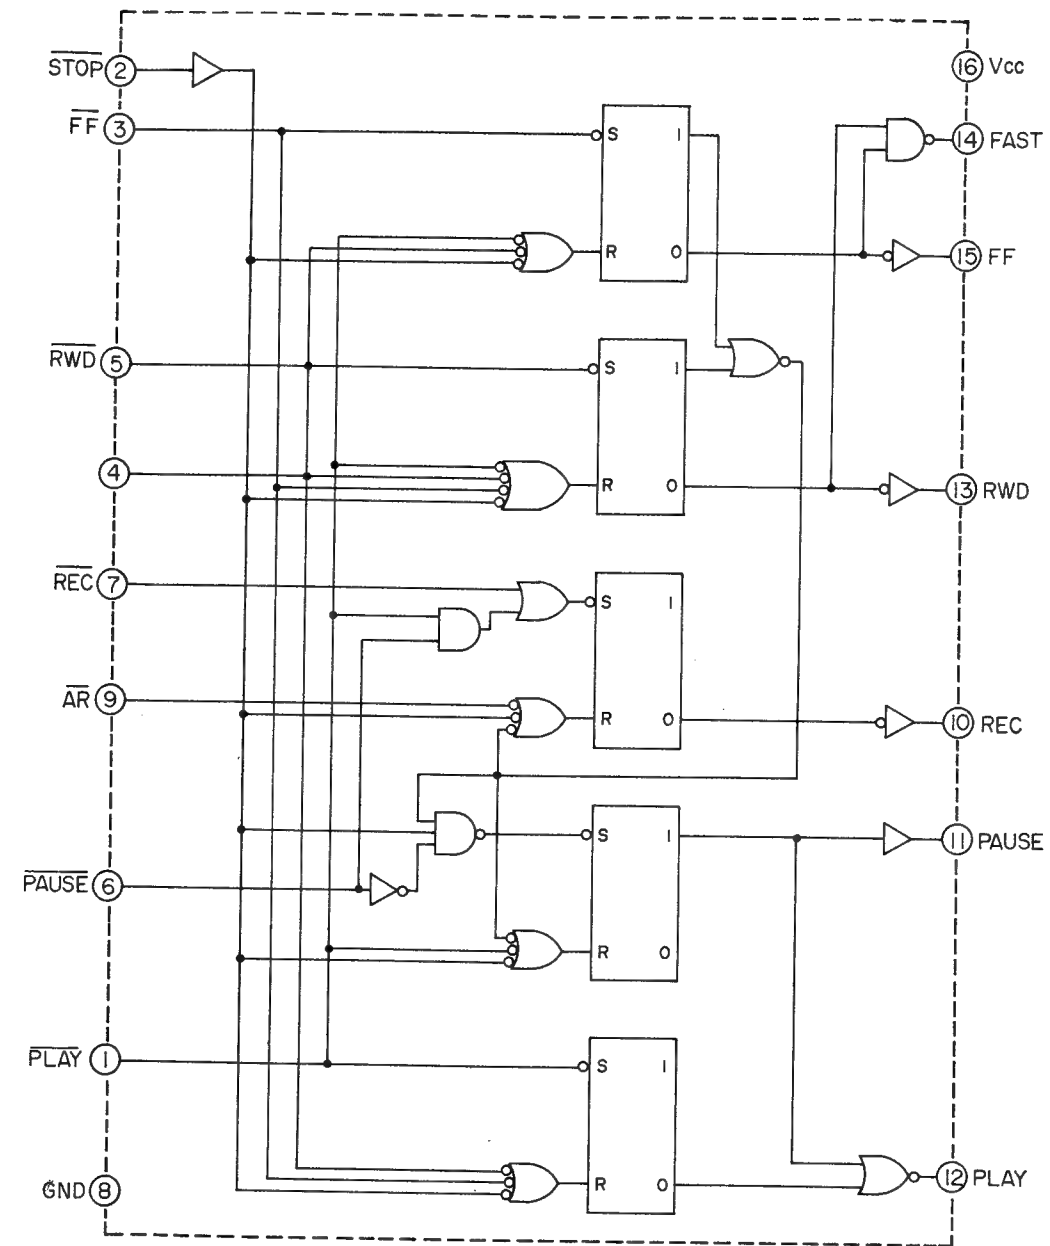

Fig. 4 M54410P

2) Terminals and their functions

	Terminal Name	Terminal Function
Operation input terminals	$\overline{\text{STOP}}$	Input terminal for stopping operation
	$\overline{\text{FF}}$	Input terminal for fast forward
	$\overline{\text{REW}}$	Input terminal for rewind
	$\overline{\text{REC}}$	Input terminal for recording
	$\overline{\text{PAUSE}}$	Input terminal for pause
	$\overline{\text{PLAY}}$	Input terminal for playback
Control input terminal $\overline{\text{AR}}$		Input terminal for preventing recording
Output terminals	FAST	Terminal with "H" signal output during fast forward or rewind mode
	FF	Terminal with "H" signal output during fast forward mode
	REW	Terminal with "H" signal output during rewind mode
	REC	Terminal with "H" signal output during REC/PLAY or REC/PAUSE mode
	PAUSE	Terminal with "H" signal output during pause mode
	PLAY	Terminal with "H" signal output during playback mode

Chart-1

3) Operation activated by each input

Input Signal	Output						Output Mode
	FAST	FF	REW	REC	PAUSE	PLAY	
$\overline{\text{STOP}}$	L	L	L	L	L	L	STOP Mode
$\overline{\text{FF}}$	H	H	L	L	L	L	FF Mode
$\overline{\text{REW}}$	H	L	H	L	L	L	REW Mode
$\overline{\text{PLAY}}$	L	L	L	L	L	H	PLAY Mode
$\overline{\text{PAUSE}}$	L	L	L	L	H	L	PAUSE Mode
$\overline{\text{REC/PLAY}}$	L	L	L	H	L	H	REC/PLAY Mode
$\overline{\text{REC/PAUSE}}$	L	L	L	H	H	L	REC/PAUSE Mode

Chart-2

- NOTES:
1. The input signal is activated by the fall of $\overline{\square}$.
 2. The output is maintained until the next input signal.
 3. $\overline{\text{AR}}$ is a control input terminal and the REC output is not "H" when $\overline{\text{AR}} = \text{"L"}.$
 4. When $\overline{\text{AR}} = \text{"L"}.$ signal is supplied during the REC output is "H", REC output becomes "L".
 5. At the moment the power is on, all output will be "L" and the Stop mode will be effected.

1-2. Transistor and Plunger Activated for Each Operation (Refer to Sys. Con Schematic Diagram)

	TR40	TR42	PLAY PLUNGER	TR35	TR37	BRAKE PLUNGER	TR52	TR54	REC PLUNGER	TR50	PAUSE PLUNGER

Δ: Momentary Operation

Chart-3

2. DIGITAL COUNTER CIRCUITRY OPERATION

2-1. Circuit Structure of IC1 TC5054P

TC5054P is an IC for a 4 digit, decade up/down counter with a built-in 7 segment driver/decoder. On the inside, with the counter as base it is constructed of a 4 digit latch, multiplexer, scanning

oscillation circuit and a driver/decoder driving the LEDs directly. The clock input is separate for down and up clocks and each input has a schmitt trigger for shaping the waveform.

1) Block Diagram

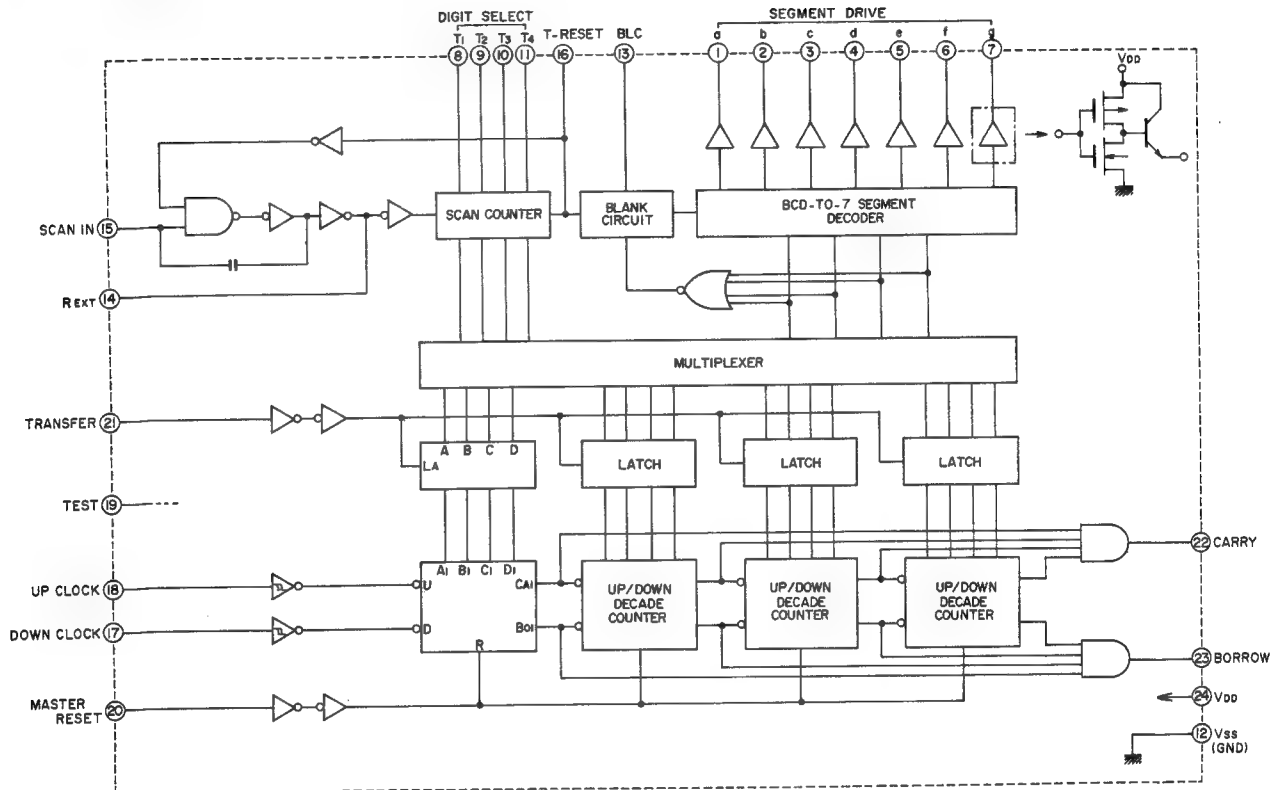

Fig. 5 TC5054P

2) Description of Pin Function

PIN NO.	SYMBOL	NAME	FUNCTION		
1	a	SEGMENT a	a-g are outputs which change the decade up/down counter BCD output in 7 segment display element drive code. These segment signals are output dynamically from the highest digit at the same time as SCAN input. Generous calculation of the IOH input enables the direct cathode common type LEDs to be driven.		
2	b	SEGMENT b			
3	c	SEGMENT c			
4	d	SEGMENT d			
5	e	SEGMENT e			
6	f	SEGMENT f			
7	g	SEGMENT g			
8	T ₁	DIGIT SELECT 1	Outputs for displaying the number of digits of a-g outputs and correspond in order to the highest digit from T ₁ . By applying the clock to the SCAN input changes T ₁ → T ₂ → T ₃ → T ₄ → T ₁ automatically.		
9	T ₂	DIGIT SELECT 2			
10	T ₃	DIGIT SELECT 3			
11	T ₄	DIGIT SELECT 4			
12	V _{SS}	V _{SS}	(GND)		
13	BLC	BLANKING CONTROL	"H"	Not zero suppressed	Digits higher than the position (n-1) can have the leading zero suppressed by connecting with T _n .
			"L"	All digits Leading zero suppressed	
14	R _{EXT}	REGISTER EXTERNAL	Scan clock generated if a resistor is connected in between it and S _{IN} . Open when S _{IN} is applied from outside.		
15	S _{IN}	SCAN IN	Is the clock input for the digit selection counter and if a resistor is connected between it and R _{EXT} ., can oscillate itself. (Equally a pulse may be added from outside.)		
16	TR	T-COUNTER RESET	The input of "H" level can stop the SCAN counter. When TR is raised, the SCAN counter will always open scanning from T ₁ .		
17	DOWN	DOWN COUNT	With the UP input at "H" level by applying a pulse, the internal counter counts down at the raised part of the pulse.		
18	UP	UP COUNT	With the DOWN input at "H", by applying a pulse, the internal counter can count up at the raised parts of the pulse.		
19	TEST	TEST	Conducted at "L" level. (If at "H" level the count will change at the raised and lowered of the pulse.)		
20	MR	MASTER RESET	During count can be cleared to "0000" by inputting "H" level.		
21	TRF	TRANSFER	With a "H" level input, the counter's contents are usually passed through the multiplexor and then output. With "L" level input, the counter's contents are held in the LATCH circuit until it changes to "L" and even if the counter's contents change it does not change.		
22	CARRY	CARRY	During UP COUNT, when the counter registers "999", "H" level is output only while the UP CLOCK is "L" level.		
23	BORROW	BORROW	During DOWN COUNT, when the counter registers "0000", "H" level will be output only while the DOWN CLOCK input is at "L".		
24	V _{DD}	V _{DD}	(V _{DD})		

Chart-4

2-2. Count Operation

Fig. 6

The count pulse is generated by PH 1 together with the reel revolution. This pulse is amplified by TR9 and TR10, its waveform shaped by TR13 and TR15 during FF and PLAY and then it is input into TC5054P as up clock. During REW, its waveform is shaped by TR11, TR12 and TR14 and input as down clock. TR19 and TR20 switch between up clock and down clock.

1) UP Count Operation in FF or PLAY Modes

(Refer to Schematic 2, 5 and Fig. 6)

In FF or PLAY modes, as TR20 is OFF, base bias is added to TR19 through R60 turning TR19 ON. As a result, TR12's collector becomes earth potential and the count pulse is not added to TR14. In this way, the count pulse amplified by TR9 and TR10 passes through TR13 and TR15 and is input into the up count of TC5054P as up count pulse. At this point the pulse widths are different in FF and PLAY modes so TR60 is turned ON (FF mode) and OFF (PLAY mode), C61's charging curve is changed and the count operation secured. In the FF mode, as TR59 and TR60 are ON, the charging time for C61 is decided by R174-C61 and is short if compared with PLAY. In the PLAY mode, as TR54 and TR60 are OFF, the charging time for C61 is decided by (R26 + R173) - C61 and is longer than FF. In the PLAY mode, a noise pulse may be generated by light but this is eliminated by C61 by making the time longer and miscounting is prevented. Fig. 6 is the waveform of points A to E drawn in the Schematics 2, 5.

2) Down Count Operation During REW (Refer

to Schematic 6 and Fig. 6).

In the REW mode, base bias is added to TR20 and TR20 is turned ON. Next, as TR19 is OFF, "H" level is input into IC6 ⑤, ⑥ through R57 and "L" level is output to IC6 ④. As a result, TR13's collector becomes earth potential and the up count pulse is not added to the base of TR15. In this way, the count pulse amplified by TR9, TR10 passes through TR11, TR12 and TR14 and is input into the down count input of TC5054P as down count pulse.

3) Memory Stop Operation (Refer to Schematic 6)

"H" level appears in TC5054P's BORROW terminal ②③ when the counter has become "0000" at down count. When the counter reaches "0000" when set at memory stop, "H" level appears from the BORROW terminal so passing through SW1 then IC4 ② becomes "H" level.

IC4 ③ is open and "H" level because the Auto System switch is at STOP. As a result, IC41 changes to "L" level and M54410P's stop input terminal is made "L" level. In this way, it changes to STOP mode from REW when the counter reaches "0000".

4) "0000" Indication Operation When the Power is Connected.

When the power supply is connected, TR25 turns ON only while C37 is being charged and through R97 "H" level is added to TR5054P's reset terminal. The counter display shows "0000".

In this way, then the power is supplied, "H" level is added to the reset terminal so that the counter will begin from "0000".

VII. MECHANISM ADJUSTMENT

Fig. 7 Mecha Frame Block

1. PLAY PLUNGER INSTALLATION

POSITION ADJUSTMENT (Refer to Fig. 7)

Put in PLAY mode to activate the PLAY plunger. Adjust the position of the play plunger with the installation screws (a), (b) so that the distance between the top edge of the rubber shaft and the P lever is 2.1 to 2.3 mm. After adjustment coat the installation screws with screw lock.

2. PAUSE PLUNGER INSTALLATION

POSITION ADJUSTMENT (Refer to Fig. 7)

Adjust the position of the pause plunger with the installation screws (c), (d) so that the gap between the capstan and the pinch roller is 0.3 – 0.5 mm when changing from PLAY mode to PAUSE mode. After adjustment, paint lock the screws.

3. REC SAFETY SWITCH INSTALLATION

POSITION ADJUSTMENT (Refer to Fig. 7)

Using a cassette pack with the break-out tabs broken and a cassette pack with the break-out tabs unbroken, adjust the Rec Safety installation position until the conditions below are satisfied:

- a) does not enter into REC mode (switch point ON) when a cassette pack with the break-out tabs broken is inserted.
- b) does enter into REC mode (switch point OFF) when a cassette pack with the break-out tabs unbroken is inserted.

after adjustment, paint lock the screws.

4. TAPE SPEED ADJUSTMENT

(Refer to Fig. 7)

Connect the frequency counter to the line output terminals. Playback a 1,000 Hz prerecorded test tape and adjust tape speed adjustment volume to obtain a tape speed of 1,000 Hz $\pm 1.5\%$.

Fig. 8 Sub Frame Block

Fig. 9 Flywheel Adjustment

5. BRAKE PLUNGER INSTALLATION

POSITION ADJUSTMENT (Refer to Fig. 8)

Once the core of the brake plunger has been pushed in the direction of the arrows, (the brake plunger is in operation) loosen the two installation screws and alter their position until gap A is 4.0 to 4.2 mm.

After adjustment, paint lock the screws.

6. FLYWHEEL LOOSE PLAY ADJUSTMENT

(Refer to Fig. 9)

Adjustment by turning flywheel loose play adjustment screw to obtain a 0.05 to 0.20 mm of loose play when the flywheel is moved as indicated by the arrow mark. After adjustment, paint lock the screws.

Fig. 10

7. PINCH ROLLER PRESSURE MEASUREMENT (Refer to Fig. 10)

At playback mode, push the pinch roller with a spring gauge until the pinch roller separates from the capstan by about 1 mm to 2 mm and then gently return. Take a reading of the spring gauge indication at the moment the pinch roller touches the capstan and begins to rotate.

Specified Pinch Roller Pressure: 350 to 450 gm
In case specified pressure cannot be attained, replace the pinch roller spring.

8. WINDING TORQUE MEASUREMENT IN EACH MODE

Insert cassette torque meter and measure in each mode. For fast forward and rewind measure at the end of the tape when the tape has stopped running. The specified torque is:

Play: 35 to 55 g-cm.

Fast Forward, Rewind: 70 to 120 g-cm.

When both the standard torque values are extremely small, check to see if there is any oil on the idler, reel table and motor pulley.

Fig. 11

9. ADJUSTMENT OF DIGITAL COUNTER'S SENSITIVITY (Refer to Fig. 11)

Make an empty pack, without the tape by removing only the tape from a TDK Low Noise Pack. Insert this cassette pack and put to PLAY mode. Connect a oscilloscope between the T.P. (R24's TR9 base side) and earth. Adjust with VR2 500B until the oscilloscope's waveform is $V > 0.2V$, $T > 7 \text{ msec}$.

VIII. HEAD ADJUSTMENT

Fig. 12 Head Adjustment

Fig. 13 Mirror Cassette

Fig. 14 AKAI Head Projection Gauge

1. TAPE GUIDE HEIGHT ADJUSTMENT

(Refer to Figs. 12, 13)

- 1) When using an ordinary cassette, the tape guides and heads, etc. are not visible. As shown in Fig. 13 use a cassette tape from which part of the cassette case has been cut out and a mirror installed for easy visibility of the head area when making tape guide height adjustment.
- 2) To adjust the height of Tape Guide (A), take the height of the Tape Guide (B) as the standard height. Normally do not adjust the height of the combined erase head and Tape Guide (B). Adjust the height of the Tape Guide (A) in the PLAY mode so that the tape runs smoothly without getting caught in a tape guide.
- 3) When changing the erase head, adjust the height of the Tape Guide (A) completely before changing

the erase head. Change the erase head. This time, taking the height of the Tape Guide (A) as the standard height, change the Erase Head height Adjustment Plate with one of different thickness and adjust the height of the Tape Guide (B).

2. REC/PB HEAD PROJECTION

ADJUSTMENT (Refer to Figs. 12, 14)

Insert the AKAI Head Projection Gauge (Fig 14) and adjust screws (a) and (b) so that it reads 34 to 3.65 mm in the Playback Mode.

3. RECORDING/PLAYBACK HEAD HEIGHT ADJUSTMENT (Refer to Figs. 12, 13)

- 1) Utilize the cassette tape used in Tape Guide Height Adjustment above, and playback the leader tape part of cassette tape.
- 2) As shown in Fig. 12, adjust head height with screws (c), (d) and (e) until the upper edge of the tape is the same height as the upper edge of the left channel REC/PB head core.
- 3) After completing adjustment step 2), playback the Head Height adjustment tape (4 track, 1,000 Hz) and adjust Head Height adjustment screws (c), (d), (e) to put the output power from both channels to maximum.

4. RECORDING/PLAYBACK HEAD AZIMUTH ALIGNMENT ADJUSTMENT (Refer to Fig. 12)

- 1) Playback a 10 kHz pre-recorded cassette azimuth alignment test tape and adjust screw (d) shown in Fig. 12 to obtain maximum output on both channels.
- 2) Invert cassette and confirm that the output level does not change from that obtained in Item 4-1) above. If the output level differs, adjust in the same way as in Item 4-1) above until both sides of the test tape display equal output.
- 3) After adjustment, check head height and azimuth alignment again.

- NOTES:
1. Be sure to clean the heads prior to head adjustment.
 2. Be careful not to use a magnetized driver or other magnetized tools in the vicinity of the heads.
 3. Be sure to demagnetize the heads with a Head Demagnetizer before and after head adjustment.
 4. When a mirror installed cassette test tape as shown in Fig. 13 is required, it can be ordered from AKAI Electric Co.

IX. AMPLIFIER ADJUSTMENT

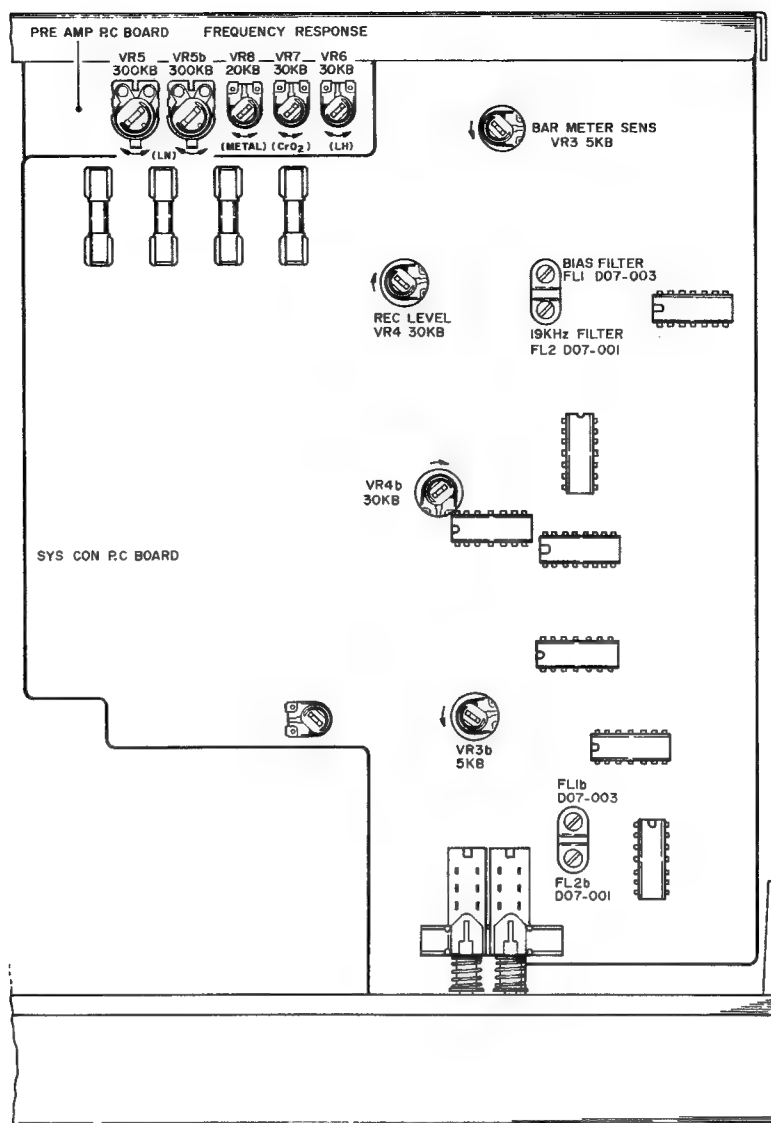

Fig. 15 Amplifier Adjustment Points (Top View)

Fig. 16 Amplifier Adjustment Points (Right Side View)

Step	Adjustment Item	Test Tape Supply Signal	Mode	Adjustment Point	Result	Remarks
1	Playback Level	333 Hz, 0 VU Test Tape	PB	VR2 50 k Ω	-5.5 ± 0.3 dBm (410 mV)	
2	Bar Meter Sensitivity	1,000 Hz -5.5 dBm from oscillator	REC	VR3 5 k Ω	Let +1 light up. Then turn in a direction so that +1 disappears. Adjust at the point which +1 disappears.	
3	Playback Equalizer	10 kHz Test Tape	PB	VR1 10 k Ω	-19.0 ± 0.5 dBm	
4	LN Position Frequency Response	Low Noise blank tape. 1,000 Hz 10,000 Hz -25.5 dBm recording	REC/PB	VR5 300 k Ω	1,000 Hz to 10,000 Hz flat	
5	LH Position Frequency Response	LH Blank tape 1,000 Hz 10,000 Hz -25.5 dBm recording	REC/PB	VR6 30 k Ω	1,000 Hz to 10,000 Hz flat	Set tape selector to LH Position
6	CrO ₂ Position Frequency Response	CrO ₂ Blank tape 1,000 Hz 10,000 Hz -25.5 dBm recording	REC/PB	VR7 30 k Ω	1,000 Hz to 10,000 Hz flat	Set tape selector to CrO ₂ Position
7	Metal Position Frequency Response	Metal Blank tape 1,000 Hz 10,000 Hz -25.5 dBm recording	REC/PB	VR8 20 k Ω	1,000 Hz to 10,000 Hz flat	Set tape selector to Metal Position
8	Recording Level	LN Blank tape 1,000 Hz -5.5 dBm recording	REC/PB	VR4 30 k Ω	-5.5 ± 0.3 dBm	Set the MIC Volume to Minimum
9	Distortion Factor Confirmation	1,000 Hz -5.5 dBm recording	REC/PB		LN < 0.8% LH < 0.8% CrO ₂ < 0.7% Metal < 0.6%	NOTE 6
10	Bias Filter	No signal input	REC	FL 1 D07-003	AC Voltmeter indicates to minimum	Set tape selector to Metal Position Set REC Volume to maximum NOTE 8
11	19 kHz Filter adjustment	19 kHz from oscillator	REC	FL 2 D07-001	AC Voltmeter indicates to minimum	Set Dolby NR Switch to ON Position. NOTES 7, 8.

Chart-5

-
- NOTES:
1. The Output Level Control should be at maximum.
 2. Because each of these adjustments is vital to perfect Dolby NR circuit operation, ensure that they are carried out with as few errors as possible.
 3. Except for Step 5 thru 7, 9 and 10, set Tape Selector to LN Position.
 4. Except for Step 12, set Dolby NR switch to OFF Position.
 5. Use the following cassette measuring tapes:

LN tape	:	TDK	D	C-60
LH tape	:	Maxell	UD	C-60
CrO ₂ tape	:	TDK	SA	C-60
Metal tape	:	TDK	MA-C	C-60
 6. If it does not comply with the specifications, repeat Steps 4 to 8 and readjust.
 7. Adjust the oscillator's frequency to give a frequency counter reading of 19.00 kHz.
 8. Unless the core is moved unintentionally this adjustment is not necessary.

X. DC RESISTANCE OF VARIOUS COILS

Parts	Designation	DC Resistance
Recording/Playback Head	PR4-7	650 ohms $\pm 10\%$
Erase Head	HF213151	3.7 ohms
Play Plunger Solenoid	1253PLTI	73 ohms $\pm 10\%$
Rec Plunger Solenoid	1037TLTI	120 ohms $\pm 10\%$
Pause Plunger Solenoid	0520FLT	600 ohms $\pm 10\%$
Brake Plunger Solenoid	0730PLTI	200 ohms $\pm 10\%$

Resistor and Capacitor which is not listed in this parts list, please refer to
COMMON LIST FOR SERVICE PARTS.

HOW TO USE THIS PARTS LIST

1. This parts list is compiled by various individual blocks based on assembly process.
2. When ordering parts, please describe parts number, serial number, and model number in detail.
3. How to read list.

Ref. No.	Parts No.	Description	Schematic No.
FLYWHEEL BLOCK #13			
12-115x	800425	Flywheel Block Assy. Comp.	RDG #13
12-116	244506	Flywheel Only	RD-233
12-117x	244754	Felt, Flywheel	RD-275
12-118	251324	Main Metal Case	RD-236
12-119	253080	Main Metal	RD-237

4. The symbol numbers shown on the P.C. Board list can be matched with the Composite Views of components of the Schematic Diagram or Service Manual.
5. The indications of Resistors and Capacitors in the photos of P.C. Board are being eliminated.
6. The shape of the parts and parts name, etc. can be confirmed by comparing them with the parts shown on the Electrical Parts Table of P.C. Board.
7. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List.
It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index. (meaning of ref. no. outlined in Item 3 above).
8. Utilize separate "Price List for Parts" to determine unit price. The most simple method of finding parts Price is to utilize the reference number.

CAUTION:

1. When placing an order for parts, be sure to list the parts no. model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Service Manual (Basic Parts list) may be partially changed, please use this parts list for all future reference.

WARNING: ⚠ INDICATES SAFETY CRITICAL COMPONENTS. FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMMENDED PARTS.

AVERTISSEMENT: ⚠ IL INDIQU LES COMPOSANTS CRITIQUES DE SURETE. POUR MAINTENIR LE DEGRE DE SECURITE DE L'APPAREIL NE REMPLACER LES COMPOSANTS DONT LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DES PIECES RECOMMANDEES PAR LE FABRICANT.

AC INLET SYSTEM

This model is equipped with an AC INLET SYSTEM. Please refer to the AC INLET SYSTEM CHART below for the specific type. By the AC INLET SYSTEM, AC (mains) cord can be connected to and disconnected from the model because the model is provided with socket exclusively for AC (mains) cord on its main body.

Please note, however, that certain models are not equipped with this system and has a built-in AC (mains) cord as before.

AC INLET SYSTEM CHART
